

Bug Fix Verification Report

Bug Fix Verification: Event Name Reset on Custom Event (Bug #1826)

Bug ID: #1826

Description: Event Name field is not reset when Event Type is changed to Custom Event.

Status: Resolved

Date: 2026-01-08

1. Issue Description

When a user selects an event type (e.g., "Birthday"), the "Event Name" field is auto-populated (e.g., to "Birthday"). However, if the user subsequently switched the Event Type to "Custom Event", the previously auto-populated value remained in the "Event Name" field instead of clearing out to allow for manual entry.

2. Reproduction Steps

1. Navigate to the **Create Wish** wizard.
2. Proceed to **Step 1: Event Details**.
3. Click on **"Birthday"** (or Anniversary/Festival).
 - **Observation:** Event Name auto-fills with "Birthday".
4. Click on **"Custom Event"**.
 - **Expected:** Event Name should clear or reset to empty.
 - **Actual (Pre-fix):** Event Name remained as "Birthday".

3. Fix Implementation

Modified `frontend/src/components/dashboard/CreateWishWizard.js`.

Updated the `onClick` handler for the Event Type buttons to explicitly check if the selected type is `Custom Event`.

- If **Custom Event**: Set `event_name` to `` (empty string).
- If **Other**: Set `event_name` to the selected type (e.g., 'Birthday').

```
// frontend/src/components/dashboard/CreateWishWizard.js
```

```
onClick={() => {  
  handleChange('event_type', type);  
  // Auto-fill name logic  
  if (type !== 'Custom Event') {  
    handleChange('event_name', type);  
  } else {  
    handleChange('event_name', ''); // Reset for custom entry  
  }  
}
```

Bug Fix Verification Report

```
handleChange('occasion', type); // Sync occasion  
}}
```

4. Verification Results

- [x] **Step 1:** Selected "Birthday". Verified `event_name` became "Birthday".
- [x] **Step 2:** Switched to "Custom Event". Verified `event_name` cleared to `""`.
- [x] **Step 3:** Switched back to "Festival". Verified `event_name` became "Festival".
- [x] **Step 4:** Manually typed a name in Custom Event. It persisted correctly until type change.

Result: The Event Name field now correctly resets when "Custom Event" is selected, improving the user experience and preventing incorrect event labeling.
