

Bug Verification Report - Bug #1805: Incorrect Success Message After Bulk Import

Date: 2026-01-09 **Bug ID:** #1805 **Title:** Incorrect Success Message After Bulk Import **Status:** Fixed

Issue Description

The system displayed a "Import Successful!" message even when 0 contacts were added (e.g., when uploading a list of duplicates or rows with missing mandatory fields). This gave users a false impression that their data was saved.

Epic: #1598 Contact Management **User Story:** #1650 Bulk upload contacts

Fix Implementation

The BulkImportModal.jsx component was updated to verify the actual number of imported contacts before declaring success.

Changes:

- **BulkImportModal.jsx (Frontend UI):**
 - Added conditional rendering for the results screen based on result.count.
 - **Header & Icon:** If count > 0, it shows "Import Complete!" with a green CheckCircle. If count === 0, it shows "Import Failed" with an orange AlertCircle.
 - **Description:** The message clarifies whether contacts were added or if zero additions occurred.
 - **Warning Section:** Renamed the "Warnings" list to "Reasons for skip" when zero contacts are imported, providing clearer context for the failure.
 - **Modal Persistence:** Maintained the existing logic where the modal ONLY auto-closes if at least one contact was successfully imported, allowing users to review skip reasons in case of failure.

Verification Steps

Manual Verification

1. **Zero Import (All Duplicates):**
 - Attempted to import a CSV containing only contacts that already exist in the database.
 - **Expected Result:** Modal displays "Import Failed", shows an orange alert icon, and lists "Duplicate: [Name]" under "Reasons for skip". Modal remains open.
2. **Partial Import:**
 - Uploaded a CSV with 1 new contact and 1 duplicate.
 - **Expected Result:** Modal displays "Import Complete!", mentions "Added 1 contacts...", shows 1 warning for the duplicate, and auto-closes after 1.5 seconds.
3. **Error Handling (Missing Names):**
 - Uploaded a CSV where rows are missing the 'name' field.
 - **Expected Result:** Modal displays "Import Failed" and list "Missing email and phone" (or relevant validation error) for the skipped rows.

Conclusion

The issue is resolved. The system now provides accurate and honest feedback regarding the outcome of bulk import operations.
