Bug Verification Report - Bug #1813: Relationship Dropdown Consistency

Date: 2026-01-09 **Bug ID:** #1813 **Title:** Mismatch Between Relationship Filter Values and Add Contact Dropdown Values **Status:** Fixed

Issue Description

There was an inconsistency in the "Relationship" categories across the Contacts page. The search filter included a "Work" option, but this option was missing from the "Add Contact" and "Edit Contact" forms, preventing users from categorizing contacts as "Work" while still having a filter for it.

Epic: #1598 Contact Management **User Story:** #1649 Search and filter contacts

Fix Implementation

The relationship options were synchronized between the list filter and the contact form.

Changes:

- **ContactFormModal.jsx (Frontend UI)**:
  - Added <option value="Work">Work</option> to the relationship selection dropdown.
  - Ensured the new option follows the dark-themed styling (bg-[#181820] text-white) applied to other dropdown items.

Verification Steps

Manual Verification

1. **Check Filter Dropdown**:
   - Navigated to the Contacts page.
   - Verified the filter dropdown contains: All Relationships, Friend, Family, Colleague, Work, Other.
2. **Check Add Form**:
   - Clicked "Add Contact".
   - Verified the relationship dropdown contains: Select Relationship, Friend, Family, Colleague, Work, Other.
3. **End-to-End Test**:
   - Created a new contact with the relationship "Work".
   - Applied the "Work" filter on the contacts list.
   - **Expected Result**: Successfully created the contact with the "Work" label, and the contact appeared correctly when the "Work" filter was active.

Conclusion

The issue is resolved. Relationship values are now consistent across all UI components on the Contacts page, ensuring a smoother data entry and filtering experience.
